

Environmental Policy

The idea of environmental protection has become more and more important in our society over the last decades. Especially in Germany and Europe there is a very strict environmental policy. Compliance with all legal requirements is of great importance to us and the topic of environmental protection is a very important part of our corporate policy. For this reason, we have been operating an environmental management system in accordance with the international standard DIN EN ISO 14001:

ISO 14001

This international standard is the most important standard worldwide for environmental management that a company can fulfill.

We are very proud to have been certified to ISO 14001 since 2011.

We do everything in our power to optimise our performance in all our business areas and continuously reduce our environmental impact. This includes the following measures, among others:

- Fulfilment and compliance with all requirements according to DIN EN ISO 14001
- Regular training of our employees for greater environmental awareness
- Public announcement of our corporate policy
- Purchase of sustainable products
- Integration of environmental concerns into our investment decisions
- Reduction of waste production to a minimum
- Separation and separate disposal of waste/removal goods on the premises
- Environmentally friendly and professional disposal of electrical appliances
- Taking the packing material with us after the move
- Professional disposal or recycling of removal and packaging materials
- Avoidance of empty runs through cooperation with partners
- Reduction of car journeys through online/video visits
- Use of environmentally conscious vehicles (EURO 6 standard)
- Use of energy saving lamps and a timer for the outdoor lighting system
- Switching off all electrical devices after work
- Economical use of water, electricity and paper
- Reduction of heating costs (e.g. through thermostats)
- Using the power saving options for PC monitors

We constantly monitor our operational activities and identify further areas in which we can limit negative effects on the environment through our business activities as far as possible - in line with our motto:

„Think Green. Act Green.“
